

HOW TO MAKE AN

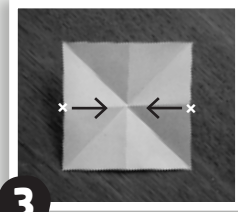

ORIGAMI CHURCH

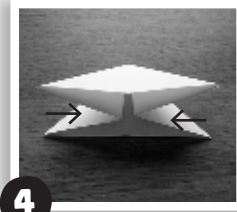

1 Fold a square piece of paper in half both lengths and sideways, unfolding it each time.

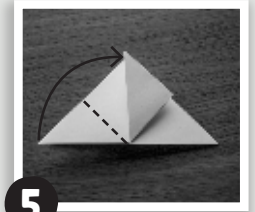

2 Turn the paper over, then fold in half along the diagonal lines, unfolding it each time.

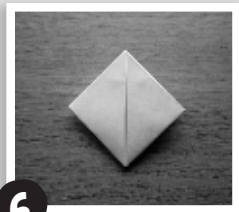

3 Push the points in the fold (shown above) inwards, allowing the creases to fold.

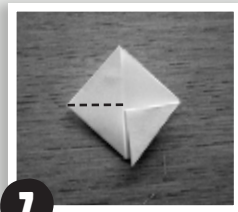

4 You should end up with a shape that is a triangle when laid flat.

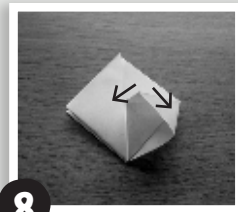

5 Fold each bottom corner of the top layer up to the top of the triangle.

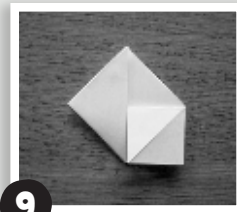

6 Turn it over, and fold up the two corners on the other side too, making a diamond.

7 Fold the top point of the triangle on each side down to the bottom point, and then unfold.

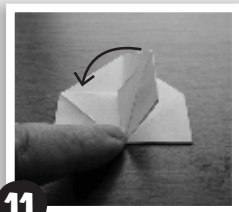

8 Push your finger into the gap and squish the paper down along the folds you just made.

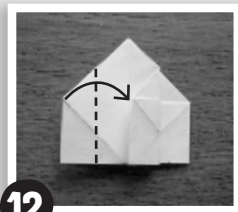

9 Flatten each side down so that the triangles are now square shapes.

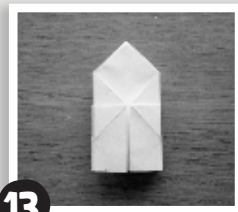

10 Turn the paper over and do the same to the two triangles on the other side.

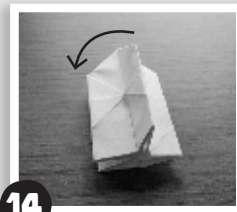

11 Turn the right hand side flap as if you are turning over the page of a book. Turn over and repeat.

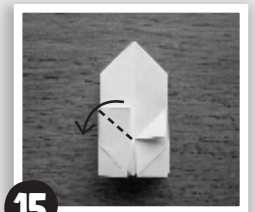

12 Fold each of the outside edges into the middle.

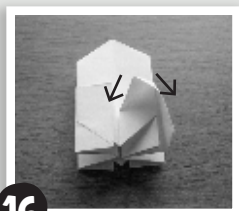

13 Turn over and then repeat the folds on the other side.

14 Turn the right hand side flap as if you are turning over the page of a book. Turn over and repeat.

15 Fold down each inner corner diagonally down to the edge, make a crease, and then unfold.

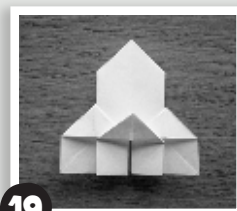

16 Push your finger into the gap and squish the paper down along the folds you just made.

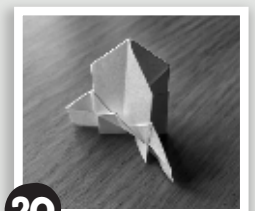

17 Flatten down along the creases to create a triangle shape on both the left and right side.

18 Fold up the centre triangle along the line.

19 You have your origami church!

20 Your church should stand up with the flaps behind.
